

VRH-3 Valve

la evolución de la especie
specie evolution

15th of January 2013

After 12 years of the highest approval by our customers, the improved version of the genuine water level **valve- VRH-3** is launched.

The new model of the valve inherits the best from its prototype, which has proved **to be successful in keeping a homogeneous water level and maximizing water availability.**

The development of the new product is based on the concept that allows **its installation and usage the most elementary and basic possible** to provide the farmer with a secure functioning. The valve offers a perfect performance.

Fast down pipe connection, the pipe does not require a thread. It simplifies the installation.

ADVANTAGES:

- Optimized membrane.
- Works with lower water pressure.
- Easy opening: manual opening and closing. No tool is required.
- Fast down pipe connection, the pipe does not require thread.
- Water supply tap at the back.
- Its works without any electrical or mechanical gadget.

The improved membrane makes the valve hermetically sealed:

Highly elastic membrane provides a **perfect fitting** and functioning.

More efficient also in installations of **lower water pressure.**

The low pressure will not be a problem anymore: the new VRH-3 allows installation of a greater number of the valves in a line.

APPLICATION:

Used in farrowing, gestation, weaning and finishing.

TECHNICAL DATA:

Nº animals	1-20	
Pressure, bar	mín.	máx.
	0,2	2
Volume, L/min.	mín.	máx.
	1	3,5
